

INSIGHT™ COMPARISON ENGINE

The InSight Comparison Engine (ICE™) from Radix Controls Inc. is an application that is specifically to supply advanced job file comparison for industrial vision sensors from Cognex Corporation®, the InSight sensor family. ICE can run as a standalone software application or integrated into Radix Controls Inc.'s File Management System solution. ICE is an invaluable tool for monitoring & tracking changes in between job files, boosting productivity by simplifying the process of job file management.

FEATURES

Cell by cell comparison of two job files

Shows cell differences by:

- Value
- State
- Binary data, or
- by a user-defined combination of the above

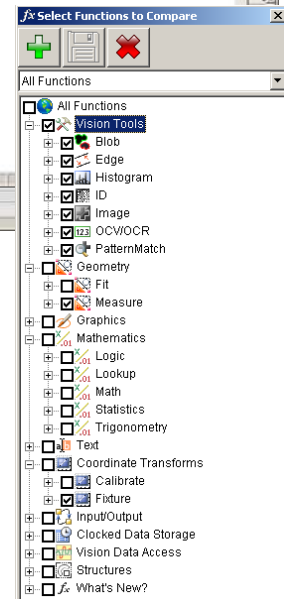

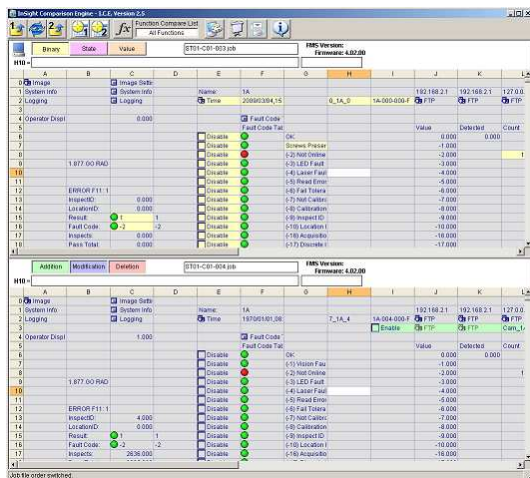

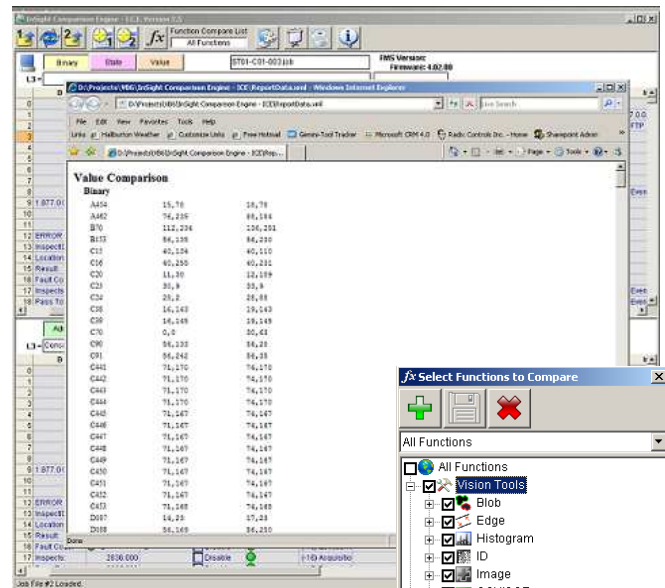

Colour-coding indicates added, deleted or modified cells

Tree view summary of Comparisons

Generates html Comparison report

Version Management (also compares firmware versions for job files)

ICE provides several higher-level functions such as ensuring data and program integrity, and permitting job editing through Insight Explorer®. ICE can be used to load files from either a PC's hard drive or the vision sensor directly.
